

This revolutionary new patented product is available **exclusively** from Aer-Flo Environmental.

## RAIN TURTLE™ **SEDIMENT LOCK**

Our **Rain Turtle™ Sediment Lock** product restricts the flow of sediment-laden stormwater more effectively than anything available on the market.

The secret to this patented product – and the reason it has such a big advantage over all other similar products – is the use of Velcro® in the design. The Velcro easily yet firmly attaches adjoining barriers and provides results that are exponentially better than products relying on zip ties and rope ties.

The **Rain Turtle™ Sediment Lock** is particularly important for sites where sediment is composed of very fine materials such as limestone, fly ash, and cenospheres. Other barriers simply aren't up to the task of containing these very small particles.

Developed by our innovative team and engineered up to the highest Aer-Flo standards, this barrier is produced with incredibly durable and impenetrable material with seams and hems that hold up to the toughest jobs imaginable. **Color** is Tough Guy Yellow.

**Velcro ensures that virtually no sediment penetrates through or between the barriers.**

**SOLD ONLY BY AER-FLO DISTRIBUTORS**
