

## BAFFLE CURTAINS

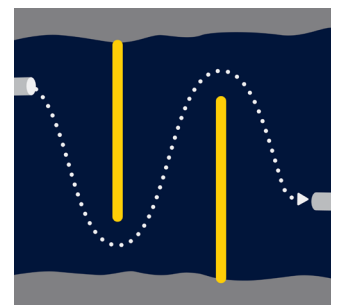

# Optimize Water & Wastewater Treatment

Baffle Curtains are a high-performance solution for optimizing water flow and treatment efficiency in basins, lagoons, reservoirs, tanks, and industrial facilities. By directing water through a controlled path, they help prevent shortcutting, increase retention time, and improve overall treatment performance.

Choose from standard curtain sizes or request custom designs tailored to your specific site requirements..

### Why Choose Baffle Curtains?

- **Affordable Retrofit** - Upgrade outdated systems without major reconstruction.
- **Improves Treatment** - Boosts disinfection, sediment control, and overall efficiency.
- **No More Dead Zones** - Promotes even flow and prevents stagnation.
- **Durable & Flexible** - Made from reinforced geomembranes, custom-built to your needs.

*Trusted by state DOTs and engineered for long-term performance, Baffle Curtains float on the surface—containing sediment and optimizing flow like no other solution.*

**Ideal for:** Retention & Sediment Basins • Potable Water Storage Tanks • Industrial Wastewater Facilities • Lagoons & Reservoirs

**Smart Design. Proven Results.** Ready to upgrade your system? Contact Aer-Flo Environmental to learn more.
